WORKZ
eSIM for IoT

Most
complete
eSIM solution

Workz overview

- ✓ The global leader in cloud-based eSIM solutions
- ✓ Hailed as the most complete and innovative eSIM solution
- ✓ Recognised as the quickest time to market for eSIM deployment
- ✓ Over 25 years' experience providing SIM solutions and member of GSMA working groups
- ✓ 150+ telcos in 80+ countries
- ✓ Highly collaborative turnkey solution for eSIM lifecycle management
- ✓ Personalised service dedicated to telcos

Get the complete eSIM solution for IoT

Workz offers a true end-to-end eSIM IoT solution from module production to remote device management and orchestration to easily manage your IoT devices, sales channels, and clients.
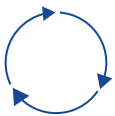

Channel management

Onboard sales channels (OEMs, MVNXs, enterprises) faster and save admin time with a multi-tenant system to efficiently manage growing sales channels and enterprise clients with channel partner self-care, white-labelling and access control.

Profile development

Streamline data generation, profile creation, testing, approvals and reduce risk with the Workz Profile Wizard, an auto profile creation tool to cut development time, risk, and cost.

Profile management

Effectively manage the profile lifecycle with online control of profile approval, activation, deactivation, bulk profile management, consolidated reporting, and smart automation of distribution timing and quantities.

Order management

Online order management cuts the administration of ordering profiles with inventory tracking and automatic emails advising top-up volumes based on burn rates to avoid profile stock-outs. This module also provides data management features to facilitate transfer, verification and approval to reduce the risk of mismatching input files with profile types.

Profile delivery

Intelligent Profile Delivery is a smart feature that automatically detects and assigns the correct profile for a device based on pre-assigned criteria. On-demand personalisation is another feature that enables real-time changes in profile values such as network name, and point-of-sales features enable activation codes to be sent directly from the system.

Profile VAS

Value-added services to support your requirements including a range of SIM applets: multi-profile swapping, multi-IMSI smart network switching, IoT Safe, custom applet development as well as OTA capabilities.

Plus a full suite of optional extras

With leading embedded module production, SIM manufacturing, data personalisation, cloud entitlement to activate companion devices, and a range of onboarding and discovery solutions, Workz caters for all your IoT needs.

Workz IoT solution overview

- ✓ Caters to all IoT use cases including constrained devices
- ✓ High scalability with capacity to manage large volumes of IoT devices
- ✓ High reach with push and pull command of devices with direct or indirect download
- ✓ Reduced admin with automation of profile assignment and switching
- ✓ Customisable device control with IoT Profile Assistant options: IPAe and IPAd
- ✓ Regional cloud hosting hubs in the US, Europe and Dubai
