- ✓ Over 25 years' experience providing SIM solutions
- ✓ 150+ telcos in 80+ countries
- ✓ Highly collaborative turnkey solution for eSIM lifecycle management
- ✓ Personalised service dedicated to telcos

## Get the complete eSIM solution

Workz offers a true end-to-end cloud-based eSIM solution; from module production to provisioning and eSIM orchestration. No other provider enables telcos to do more than Workz.

### Channel management

Onboard sales channels (enterprises, MVNXs, OEMs) faster and save admin time with a multi-tenant system to efficiently manage growing channels with admin self-care, white-labelling, and access control.

### Profile development

Streamline profile type creation, testing, approval, and reduce risk with the Workz Profile Wizard, an auto profile creation tool to cut development time, risk, and cost.

### Profile management

Easily manage the profile lifecycle with online control of profile approval, activation, deactivation etc. as well as bulk profile management, consolidated reporting, and smart automation of distribution timing and quantities.

### Order management

Online order management streamlines profile ordering. The system provides you with inventory tracking via automated emails, advising top-up volumes based on burn rates to minimise the risk of profile stock-outs. This module also provides data management features to facilitate transfer, verification, and approval to reduce the risk of mismatching input files with profile types.

### Profile delivery

Intelligent Profile Delivery is a smart feature that automatically detects and assigns the correct profile for a device based on pre-assigned criteria. On-demand personalisation enables real-time changes in profile values such as network name, and point-of-sale features enable activation codes to be sent directly from the system.

### Profile VAS

Value-added services to support your requirements include a range of SIM applets: multi-IMSI smart network switching and IoT Safe, plus custom applet development, and OTA capabilities.

### Plus a full suite of optional extras

With leading embedded module, SIM manufacturing, data personalisation, cloud entitlement to activate companion devices, and a range of onboarding and discovery solutions, Workz caters for all your IoT needs.

## Workz consumer eSIM solution overview

- ✓ First cloud-based eSIM solution with easy plug-and-play deployment
- ✓ Regional cloud hosting hubs in the US, Europe and Dubai
- ✓ First interoperable multi-tenancy solution to easily manage all sales channels and partners
- ✓ Data securely partitioned as per GSMA protocols
- ✓ Strong roadmap of solutions
- ✓ End-to-end service with responsive technical support
